

REQUIREMENT ANALYSIS

Customer Journey Map

The Customer Journey Map should focus on the person who wants to analyze agricultural data (researcher, policymaker, student, farmer, or analyst). It describes the user's journey from identifying a need to making decisions using the dashboard. A good journey map includes stages, user actions, goals, pain points, touchpoints, and opportunities.

Stage	User Activity	User Goal	Pain Point	Touchpoint
Awareness	User realizes the need to analyze agricultural crop production data.	Understand crop production trends and agricultural performance.	Raw agricultural data is difficult to interpret.	Project overview and dataset.
Access	User opens the Tableau dashboard and explores available visualizations.	Access historical crop production data easily.	Large amounts of data can be overwhelming.	Tableau Dashboard with filters and charts.
Analysis	User examines KPIs, line charts, bar charts, maps, and other visualizations.	Compare crop production, yield, cultivated area, and state-wise performance.	Identifying patterns from raw data is time-consuming.	Interactive Tableau visualizations.
Insights	User identifies trends, high-performing states, major crops, and production changes over	Gain meaningful insights from the data.	Converting analysis into useful conclusions can be challenging.	Dashboard summaries and visual analytics.

	time.			
Decision	User uses the insights to prepare reports or support agricultural planning.	Make informed decisions and recommendations.	Decisions require accurate and reliable insights.	Final dashboard, reports, and presentations.
